

"SAFE AND COMFORTABLE ON HOLIDAY WITH THE E-TRAILER-APP"

A complete overview of your motorhome or caravan! **Tyre pressure, nose weight, air suspension, levels of gas cylinder and water tank, digital spirit level, and battery status.** Now also available as a comprehensive safety system. With the E-Trailer app, you've got everything under control!

Did you know that the E-Trailer system is available as an option when ordering many new motorhome and caravan models? If so, your new caravan or motorhome will be fitted with E-Trailer's smart products straight from the factory. You can find all the latest options at www.e-trailer.nl/en/partners

E-Trailer is partner of:

EHYMER **ERIBA** **Dethleffs** **BÜSTNER** **LMC**

TRIGANO **CARAVELAIR** **Challenger** **Sterckeman** **CHAUSSON**

EASY CARAVANNING **Sunlight** **carado** **KNOTT**

SMV **ADRIA** **Hobby** **RAPIDO**

LAIKA **AUTOSTAR** **KABE**

Download the free app and try out the demo mode at
www.e-trailer.nl/en/app

"THIS IS HOW IT WORKS..."

The E-Trailer system consists of a starter package, various modules and the free E-Trailer app. The E-Trailer system can be easily fitted to any motorhome or caravan. It then alerts you to potentially dangerous situations before you set off or whilst you're on the road. You'll receive an immediate notification – for example, if tyre pressure is dropping – so that you can take the necessary action. This reduces the risk of a tyre blowout. Alternatively, check the caravan's tongue load in the E-Trailer app before setting off. This helps you avoid unsafe situations when driving your car and caravan combination. As well as safety, convenience is also a key feature of the E-Trailer app.

Thanks to the sensors, you can check the water level and see whether the gas cylinder needs replacing whilst you're at the campsite or on your pitch. This means you'll never again be caught out by an empty water tank or gas cylinder.

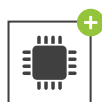

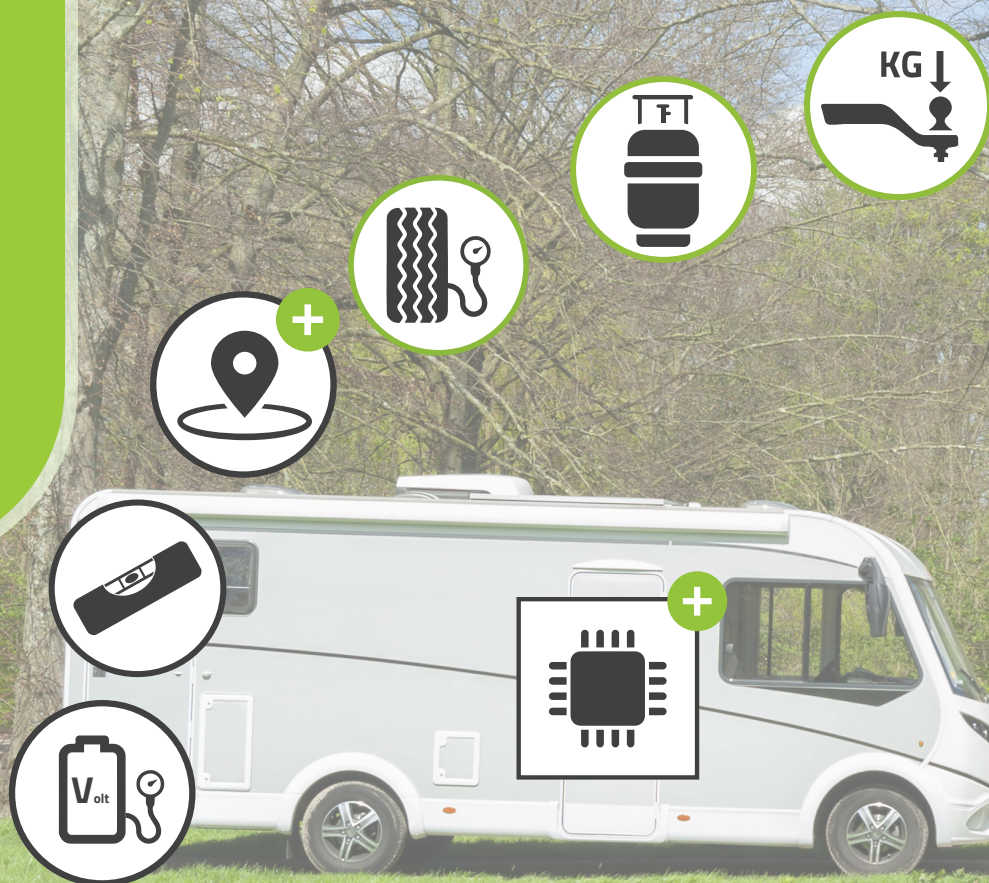

The E-Trailer system also acts as a security system with a burglar alarm, motion sensor, contact sensor and track-and-trace function, so you can take immediate action in the event of theft or a break-in.

In this brochure, you can find out how the E-Trailer system works.

The benefits of the E-Trailer system

- Marktführer ist Smart Caravaning
- In den Niederlanden entwickelt und montiert
- Passt auf nahezu jedes Wohnmobil, jeden Campervan oder jeden Wohnwagen
- Benutzerfreundlich
- Einfach auf ein anderes Fahrzeug umzubauen
- Bei immer mehr Marken über die Optionsliste erhältlich

"E-TRAILER APP: TRY IT FOR FREE?"

You can download the E-Trailer app free of charge from Google Play and the Apple App Store. Even without buying any products or registering, you can easily discover everything the E-Trailer system has to offer. E-Trailer has developed a demo mode specifically for this purpose, which you can conveniently launch via the app. This allows you to explore the wide range of possibilities offered by the E-Trailer system with no obligation.

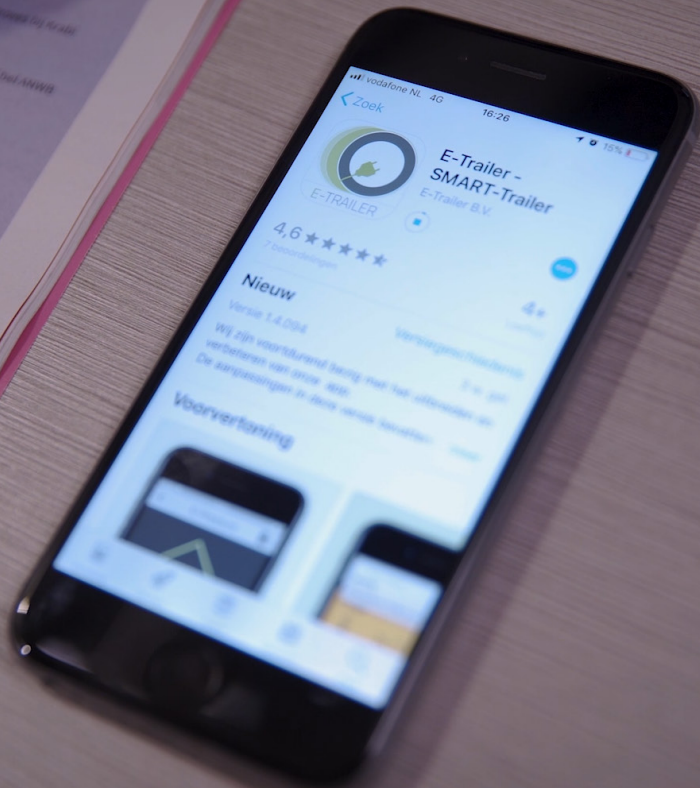

Download the free app and try out the demo mode at www.e-trailer.nl/en/app.

E-Trailer app

- User-friendly
- Free to download
- Freely accessible demo mode
- Updated regularly
- Easy to expand

"SAFE AND COMFORTABLE ON A CAMPING HOLIDAY"

A starter package is at the heart of the E-Trailer system. You can choose between the Starter Package Basic and the Starter Package Plus. This is the first step towards transforming your motorhome or caravan into a smart caravan. The starter package ensures that you can access up-to-date information about your motorhome or caravan in the E-Trailer app – all clearly organised in one place. You can then add modules as and when you wish, so you never pay for anything you don't need. No hassle – camping made easy!

Both the Starter Package Basic and the Starter Package Plus include two handy modules: E-Volt (battery status) and E-Level (digital spirit level). Read more about these modules on page ten.

The main difference between the Starter Package Basic and the Starter Package Plus lies in the distance over which you remain connected to your motorhome or caravan. The Starter Package Plus features an eSIM, so that, in addition to the Bluetooth connection, you can use an internet connection at any time by taking out a contract. With an internet connection, you not only stay connected to your vehicle even from a great distance, but you also activate an additional module: E-Track&Trace (GPS tracker). You can find more information about this handy module on page 13.

Benefits of a starter package

- Stable Bluetooth connection
- Easy connection to the on-board battery or the caravan mover's battery
- Modular and expandable
- With or without an eSIM contract

10.

Included in the
Starter Package Plus and Basic

"LEVELLING MADE EASY"

E-Level uses an electronic spirit level and shows you live and accurately on your smartphone whether your caravan or motorhome is level as soon as you drive onto the campsite or motorhome pitch. By driving one metre forwards or backwards, or moving slightly to the left or right, you can immediately tell whether this results in a good horizontal position for your motorhome or caravan. Even when driving onto wedges or using levelling blocks, you can see in real time on your smartphone when your motorhome or caravan is level. The E-Trailer app specifies the exact number of centimetres by which you need to raise each wheel to achieve a level position.

"ALWAYS ENOUGH POWER"

With E-Volt, you can see at a glance on your smartphone what the voltage is of the caravan mover's battery or the motorhome's on-board battery. If the voltage gets too low, you'll receive a warning message on your smartphone so that you can take the necessary action. This gives you peace of mind. Any type of battery can be selected in the E-Volt module: lead-acid, AGM or lithium batteries.

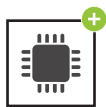

E-LEVEL & E-VOLT

E-TRACK&TRACE

Included in the Starter Package Plus

13.

"IDEAL IN THE EVENT OF THEFT: E-TRACK&TRACE"

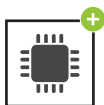

You can see the exact location of your caravan or motorhome at any time. This gives you a sense of security and complete control. With E-Track&Trace, you can set up a safety zone, known as a geofence. As soon as the motorhome or caravan leaves this zone (without your consent), you'll receive an immediate notification on your smartphone. This means you'll know where your valuable property is at any time of day. Ideal in the event of theft, so you can take immediate action. E-Track&Trace from E-Trailer has been specially developed for motorhomes and caravans and is therefore the ideal GPS tracker for campers. E-Track&Trace is included as part of the Starter Package Plus.

A subscription is required to use E-Track&Trace. You can find more information about this on page 14.

E-Track&Trace

- Built-in rechargeable battery that charges automatically as soon as the Starter Pack Plus is connected to the mains.
- Built-in SIM card for an internet connection and GPS functionality.
- Coverage throughout Europe and large parts of Africa
- Constant signal transmission whilst the vehicle is in motion (vehicle tracking system)
- Alarm function if a defined safety zone is breached

Included in the Starter Package Plus

15.

"ENJOY WITHOUT WORRIES"

"Is my motorhome or caravan really safe?" With an E-Trailer subscription, you can check the status of your camping vehicle anytime, anywhere – even from a great distance. This means you can enjoy your holiday destination with complete peace of mind.

With a subscription, you can activate E-Track&Trace (p. 12) straight away and expand your E-Trailer system with security modules such as E-Movement (p. 26), E-Switch (p. 28) and E-Alarm (p. 30). Depending on the modules you have, you'll receive remote alerts, for example if the vehicle moves or if a window or door is opened.

The remote connection is also handy when the vehicle is parked. You can easily check the status of your modules from home and prepare well for your next trip: from gas levels and tyre pressure to frost warnings.

The Starter Package Plus (p. 8) works via Bluetooth and – with a subscription – via the internet. A subscription is not available for the Starter Package Basic. You can easily take out a subscription in the E-Trailer app after installation or at any time thereafter.

Internet connection

- Always keep an eye on your motorhome or caravan
- Remote alerts and notifications
- Activate E-Track&Trace
- Connect to all your modules, even remotely
- Access to security modules

E-PRESSURE

"PREVENTING ACCIDENTS WITH THE CORRECT TYRE PRESSURE"

A tyre blowout is the last thing you want to experience with your motorhome or caravan. This is usually the result of a loss of air: the tyre pressure drops, the tyre temperature rises, and the tyre then bursts – with the risk of significant damage. You can prevent this with the E-Pressure module. As soon as the tyre pressure falls below or rises above the levels you have set, you will receive an immediate notification, allowing you to take appropriate action. The wireless sensors also measure tyre temperature – particularly useful when driving downhill. Maintaining the correct tyre pressure helps you avoid excessive fuel consumption.

A tyre pressure monitoring system (TPMS) has long been mandatory for passenger cars, but will also apply to all new motorhomes from 1 January 2027!

PLEASE NOTE!

E-Pressure

- Suitable for all motorhomes and caravans
- Retrofittable tyre pressure monitoring system (TPMS)
- Monitoring of tyre pressure and temperature
- Theft-proof wheel nuts
- Fuel-efficient
- Expandable to up to ten tyres and adjustable per axle

E-GASLEVEL

"NEVER BE CAUGHT WITHOUT A FULL GAS CYLINDER"

It may sound like a cliché, but a gas bottle always seems to run out just when you're about to start cooking or when the weather turns colder. With the E-Gaslevel module from E-Trailer, that won't happen to you any time soon. The wireless sensor measures the gas bottle's fill level and alerts you when the gas supply is running low. This means you can replace the gas bottle in good time and avoid any trouble caused by your fridge, heating or hob cutting out. The E-Trailer app also converts the percentage into kilograms. The E-Gaslevel can be easily attached using magnets to the underside of a steel gas bottle or with an adapter/bracket for aluminium gas bottles.

When it comes to gas monitoring, it's good to know that the E-Gaslevel from E-Trailer complies with the testing standards for equipment in potentially explosive atmospheres (ATEX).

E-Gaslevel

- Suitable for steel and aluminium gas bottles
- Adapter/bracket for aluminium gas bottles available
- Alerts you when gas levels are low
- Precise measurement: in per cent and in kilograms
- Multiple sensors possible
- Warning when the gas bottle is almost empty

"STABLE HANDLING THANKS TO THE CORRECT NOSE WEIGHT"

Correct nose weight is essential for a comfortable and safe journey with your caravan. If the nose weight is too low, the caravan may start to sway. If it is too high, the front wheels of your vehicle will lose grip. Both situations can be dangerous and may even result in a fine. You can find the maximum nose weight in your vehicle's owner's manual.

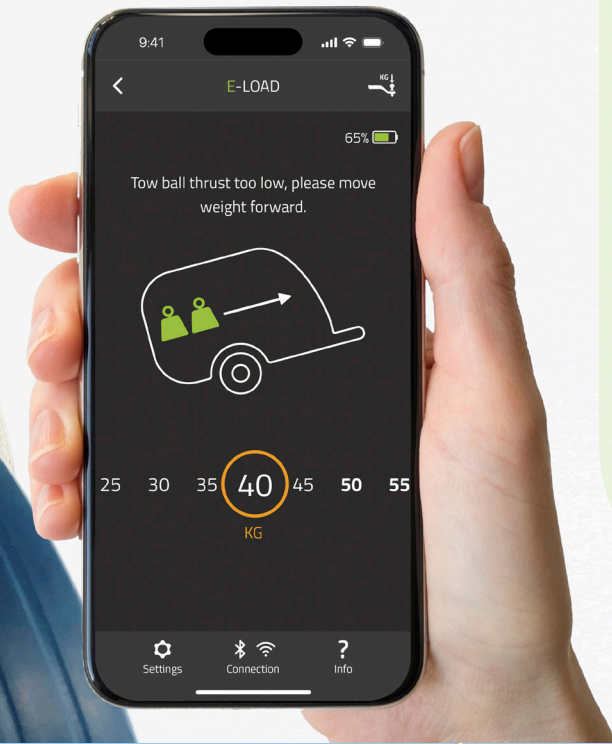

With E-Load, you can check and optimise your caravan's nose weight quickly, easily and precisely. At the touch of a button, you can read the nose weight to the nearest 2 kilograms. Should the load need adjusting, you'll receive an immediate notification in the E-Trailer app. You'll also see straight away whether the weight in the caravan needs to be shifted forwards or backwards. This means your caravan is optimally set up for departure in no time at all.

The jockey wheel is made from optimised natural rubber, ensuring the jockey wheel tyre performs reliably and smoothly even under difficult conditions.

E-Load

- A jockey wheel and nose weight sensor in one means you always have it with you
- Always on the road without a hitch, with the correct nose weight
- High-quality jockey wheel tyre for long-term use
- The sensor is cleverly integrated into the jockey wheel

E-LOAD

"ALWAYS HAVE ENOUGH DRINKING WATER"

Never find yourself unexpectedly without water whilst on holiday again. With E-Waterlevel, you always have a clear overview of your water tank's fill level. The wireless sensor measures the water level precisely in percentage and litres, so you can see at a glance in the E-Trailer app how much fresh water is still available.

The E-Waterlevel also offers added convenience when filling up. In the app, you can monitor the water level in real time, allowing you to turn off the tap in good time and prevent it from overflowing. If your water supply is running low, you'll automatically receive a notification on your smartphone.

E-Waterlevel is also ideal for the waste water tank (grey water). You will receive a warning as soon as the tank is nearly full, so you will never have a nasty surprise. The standard E-Waterlevel model is suitable for tanks with a depth of up to 40 cm. If you have a deeper tank, E-Waterlevel XL, with a measuring depth of up to 80 cm, is the solution.

NEW

With E-Waterlevel, you'll be able to configure a water tank with a non-standard shape – for even greater accuracy!

E-Waterlevel

- Suitable for all motorhomes and caravans
- For almost all fresh water and waste water tanks
- Precise measurement: as a percentage and in litres
- Low-level warning
- Measures depths of up to 80 cm
- Warning when the water tank is almost empty or full

E-WATERLEVEL

E-TEMPERATURE

"TO THE NEAREST DEGREE"

It's always useful to know the temperature, even if it's just so you can show off to friends and family at home. However, E-Temperature offers far more features. For example, you can measure the exact temperature inside your fridge, so you can be sure that your food, drinks and medicines are kept properly chilled. Monitoring the temperature can also be important if you're travelling with pets. E-Temperature alerts you if the set temperature is exceeded.

As well as the temperature, E-Temperature also displays the humidity. This is useful, for example, for detecting potential mould growth in the bathroom at an early stage.

What's more, it's easy to forget to switch on the correct power source, especially when leaving a campsite. A change in temperature can result from an incorrect power source setting. That's why E-Temperature is more useful than you might think!

E-Temperature

- Suitable for indoor and outdoor use
- Wireless sensor
- Displays temperature and humidity
- Multiple sensors can be positioned in different locations
- Alerts you if the set temperature range is exceeded

"MOTION SENSOR THAT DETECTS UNINVITED GUESTS"

In addition to E-Track&Trace (p. 12), the GPS tracker designed to protect your motorhome or caravan from theft, there is also E-Movement: a motion sensor to protect against break-ins, giving you an even greater sense of freedom and security whilst you're on holiday.

With E-Movement, you can leave your belongings in your motorhome or caravan with complete peace of mind. So enjoy your walk or cycle ride without a care in the world, and take all the time you need to explore a historic city. E-Movement's wireless sensors are keeping watch for you.

As soon as a sensor detects movement in your motorhome or caravan, you'll receive an immediate notification on your smartphone. You can then take immediate action.

TIP!

E-Movement, combined with the new E-Alarm (p. 30), helps you deter burglars as soon as they're detected.

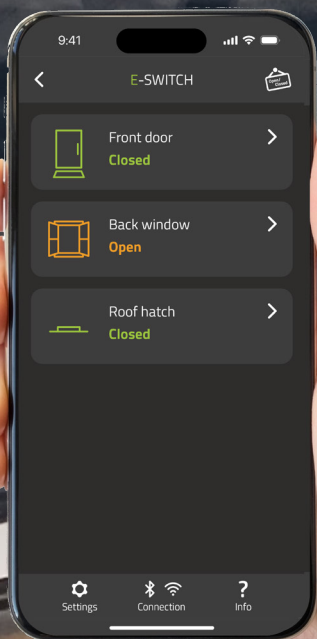

E-Movement

- Add one to a maximum of five sensors
- Range: 2 to 3 metres when ceiling-mounted,
- 6 metres when wall-mounted
- Quick installation of the sensors using two screws
- Suitable for use in an awning
- Works exclusively in combination with the Starter Package Plus with subscription (p. 14)

E-MOEMENT

E-SWITCH

"WARNING IF A WINDOW, ROOF HATCH OR DOOR IS OPENED"

Nothing is as frightening as the thought that burglars might dare to break in whilst you are asleep. That is why we have developed E-Switch, which acts as an effective burglar alarm. If a door, skylight or window is opened without your permission, you will immediately receive an alert (alarm notification) on your smartphone. You can easily activate the alarm in the E-Trailer app.

E-Switch, combined with the new E-Alarm (p. 30), helps you deter burglars as soon as they are detected.

TIP!

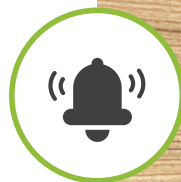

And more ...

A roof hatch or window left open when you set off – that won't happen to you with the E-Switch module from E-Trailer. Within a fraction of a second, you'll receive a notification on your smartphone, so you can stop before anything gets damaged. This means damage caused by an open roof hatch or window is a thing of the past.

E-Switch

- Alarm can be set for each window, door or skylight
- Two sensors per pack
- Only one sensor is required per window, door or skylight
- The E-Trailer app supports up to ten E-Switch sensors
- When used in combination with the Starter Package Plus and a subscription (p. 14), it acts as a burglar alarm

"SAFETY AND SECURITY SIGNALS"

NEW

With the Starter Package Plus, E-Switch (p. 26) and/or E-Movement (p. 28), you can already detect break-ins and receive an immediate notification on your smartphone. The new E-Alarm module goes one step further and can actively deter intruders with an alarm signal and a bright alarm light. For each module, you can choose how the alarm is triggered: via a smartphone notification only, with a sound, with a light, or with a combination of sound, light and notification.

E-Alarm is not only suitable for burglary detection, but can also support alerts from other E-Trailer modules, such as E-Pressure, E-Gaslevel and E-Waterlevel. In the E-Trailer app, E-Alarm distinguishes between three types of alarm signals:

- Urgent – in the event of a break-in or attempted break-in
- Useful – for example, when water or gas levels are low
- Battery notifications – when a sensor battery is running low

Incidentally, you can select and adjust the light and sound signals for each type of alarm.

E-Alarm (available from 2027)

- Deter thieves with loud sounds and bright flashing lights
- Gradually increasing alarm volume for maximum deterrence
- A 5-second silence during the pre-alarm phase, particularly useful in the event of false alarms
- Fully configurable via the E-Trailer app
- Elegant white housing that blends into almost any interior
- When used in combination with the Starter Package Plus and a subscription (p. 14), it serves as a burglar alarm

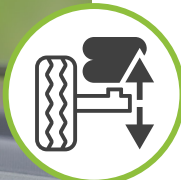

E-ALARM

E-SUSPENSION

"AIR SUSPENSION CONTROL WITH E-SUSPENSION"

The SMV retrofit air suspension system allows you to tailor the handling characteristics of your motorhome entirely to your preferences. This enhances the ride comfort of your motorhome and enables you to carry more load.

With E-Suspension, you can adjust the height and pressure of your SMV air suspension. Using the E-Trailer app, you can inflate or deflate the air suspension to achieve a firmer or, conversely, a softer ride. This reduces the strain on the shock absorbers and minimises the vehicle's tendency to lean to one side when cornering.

Using a 'Preferred Mode', you can set the ideal configuration for your SMV air suspension at the touch of a button. The E-Trailer app also shows you whether you've parked level. Did you know that with E-Suspension you can adjust the height of your vehicle by up to 7 cm per wheel on the rear axle to ensure it's level?

The E-Suspension system is suitable for a Z6/Z8 kit for the Fiat Ducato 230/244/250. The system has a modular design and can easily be expanded with additional E-Trailer modules. These include, for example, tyre pressure monitoring and checks on gas and water levels.

E-Suspension

- Improved handling
- Less disruption from speed bumps
- Precisely adjustable for each wheel
- Controlled via the E-Trailer app
- Easy to add further modules
- Quick and easy to install

CUSTOMER EXPERIENCES

"HAVE NO REGRETS!"

Ask about the E-Trailer system when ordering your new motorhome or caravan:

Jürgen and Joachim's customer experience

"Unfortunately, I didn't opt for the Starter Package Plus when I first bought my motorhome. Today, I would recommend that everyone choose the Starter Package Plus right from the start, even if the need for the extra features isn't immediately clear at the time of purchase." – **Jürgen**

Thanks to his technical background, Joachim was able to sort out a few technical issues himself during the first few months of owning his campervan. In doing so, he discovered that he was also the proud owner of a Starter Package Plus.

"Given the knowledge and confidence we now have in E-Trailer's products, my wife and I would have preferred E-Suspension, E-Movement and E-Switch to have been installed straight from the factory and, above all, integrated with our Starter Package Plus. It's simply much more convenient to be able to see everything in the E-Trailer app," says **Joachim**.

E-Trailer is partner of:

HYMER **ERIBA** **Dethleffs** **BÜSTNER** **LMC**

TRIGANO **VDL** **CARAVELAIR** **Challenger** **Sterckeman** **CHAUSSEON**
